## COINAGE, WEIGHTS AND MEASURES.

To assist in arriving at a comprehensive understanding of the value of foreign currencies, weights and measures (as expressed in foreign trade returns, tariffs, &c.) as compared with those of Canada, tables have been prepared as follows:—

As regards those of Canada, the law provides that the denominations of money in the currency of Canada shall be dollars, cents and mills, the cent being the one hundredth part of a dollar, and the mill one-tenth part of a cent.

That.—The currency of Canada shall be such that the British sovereign (the pound sterling) of legal weight and fineness, shall be equal to four dollars eighty-six cents and two-thirds of a cent.

In like manner the law provides as respects weights, that the unit shall be the standard pound (avoirdupois) of 7,000 grains, one-sixteenth part of the standard pound shall be an ounce (437½ grains) one hundred pounds a cental, and two thousand pounds a ton, and that four hundred and eighty grains shall be an ounce troy, or 5,760 grains a pound troy.

As regards measures—That the unit or standard measure of capacity, as well for liquids as for dry measures, shall be the gallon containing ten standard pounds weight of distilled water weighed with the water and air at a temperature of sixty-two degrees Fahrenheit, with the barometer at thirty inches, that the quart shall be one-fourth part of the gallon, and the pint one-eighth part of the gallon, and that eight gallons shall be a bushel.

This gallon commonly known as the 'Imperial gallon,' contains 277.274 cubic inches, or 353.036 cylindrical inches.

The standard measure of length is the yard, one-third part of which it is provided shall be a foot, and the twelfth part of such foot shall be an inch.

In many countries the Metric system of weights and measures has been adopted. A separate table of Canadian equivalents of these is given in order to avoid repetition, the word 'Metric' being used in the general table in each case where the system is in vogue, as indicating a reference to that table.

The equivalent value of the monetary unit can only be given as respects those countries having a gold standard. Where silver is the standard, the value of the currency necessarily fluctuates correspondingly to the market value of silver bullion, and were any attempt made to quote the value of such currency it would, under present circumstances, be misleading, therefore, the weight in decimal parts of an ounce with the fineness of the coin is given instead, which will enable any one to approximate the value of the currency according to the current value of fine bar silver. As an example, say fine bar silver at 75 cents an ounce, the Bolivian dollar weighs .801 of an ounce, its fineness is .900, therefore  $75 \times .801 = 60.075$  which  $\times .900 = 54.0675$ , or a small fraction over 54 cents, and the actual intrinsic value of the pure silver contained in the coin, to which should be added a reasonable allowance to cover the value of the alloy, the cost of the coinage, and in some instances exchange, the aggregate of which would be approximately the current value in Canadian currency of the dollar in question.

Unless carefully noted, the quotations as usually given of the current value per ounce of silver may be misconstrued and lead to misapprehensions, as it is sometimes quoted per ounce *fine*, and sometimes per ounce *standard*: thus for instance on a certain day the London quotation reads 'fine silver per ounce standard 32d.,' while on the same day it is quoted in New York '69½ cents per ounce fine: as 32d. is equal to a fraction over 64½ cents, there would appear a difference of about 4½ cents per ounce between the two prices, the New York price appearing that much in excess of the other, were it not noticed that one is based upon *standard* fineness and the other upon *absolute* fineness, but by reducing the New York 'fine' to London 'standard' (of .925 fine, or 444 grains fine to the ounce) the actual difference between the two quotations is found to be only about ½ of one cent per ounce, the London price being that much in excess of the New York.

To reduce the value of *standard* or sterling silver when expressed in pence to *fine* expressed in cents, multiply the pence and decimal parts thereof by 2·192.

To find the *standard* or sterling value expressed in pence and decimal parts thereof when *fine* is expressed in cents multiply the cents by 0·4562.

\*Old weights and measures sometimes used. †The values in Chinese Imperial Customs Returns are always given in Haikwan taels, which are relatively in value equal to about 1.113 Shanghai taels. The tael is in reality not a standard of value (there is no such coin), but of weight, and when used in the sense of a value it only represents its weight in gold or silver, as the case may be, the real difficulty is to establish its exact equivalent in grains. Authorities differ greatly, as also does the practice in different sections of China. The Chinese are far from being inexact, and the probability is that there exists a standard, and a further probability that it is equal to 10 Japanese monmes, or 579.72 grains, which figures have been used in computing the value as above. It will be observed, however, that these figures fall short about 3.61 grains from the weight usual (say 1 1/2 oz. per tael) in dealing with the weights other than those of gold and silver. ‡Usually reckoned same as Chinese Picul of 133 1/2 lbs. †This is long measure. ‡Cloth measure is 25" greater in length than long measure. Therefore by cloth measure 1 sun = 1.4916 in. 1 shaku = 14.916 in. and 1 jo = 149.16 in.

TABLE of Constant Factors, which multiplied by the current value per ounce of silver either pure or standard as the case may be, will give the value of the silver contained in the coin referred to, to which if there be added a small percentage to cover the value of the alloy and the cost of coinage, the aggregate will equal the intrinsic value in Canadian currency of the coin in question.

## TREATIES AND CONVENTIONS.

### AN ACT RESPECTING AN AGREEMENT BETWEEN CANADA AND CERTAIN OF THE WEST INDIAN COLONIES.

(As passed by the House of Commons, 29th April, 1913.)

His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. This Act may be cited as *The West Indian Trade Agreement Act, 1913*.

2. The agreement of the ninth day of April, one thousand nine hundred and twelve, entered into at Ottawa by representatives appointed by the Government of Canada and by the representatives of the West Indian colonies parties thereto, a copy of which is set forth in the Schedule to this Act, is hereby approved.

3. There shall be levied, collected and paid, after the said agreement is in accordance with its terms brought into operation, and so long as it remains in force, on all goods enumerated in Schedule B to the said agreement being the produce or manufacture of any of the colonies parties thereto, when such goods are imported direct from any British country into Canada or taken out of warehouse for consumption therein if imported as aforesaid, duties of customs—

(a) at the rate of four-fifths of the several rates of duties, if any, imposed on similar goods when imported from any foreign country; or

(b) at the several rates of duty, if any, set opposite to each tariff item respectively in the column "British Preferential Tariff" in Schedule A to *The Customs Tariff, 1907*, and in any amendment thereof,

whichever shall be the lower rate.

4.
